

# Omnis Managed Portfolio Service

## - Defensive

June 2022

### Portfolio Objective

The Service is designed for an investor who is looking to minimise their exposure to risky assets for a short time frame.

- This might be someone who is looking to consolidate gains ahead of a specific objective or who is concerned about prevailing market conditions. As such, they will have a preference for outcomes that have a degree of certainty.
- While, they understand that the value of their investment could fall or rise, the level of these changes is likely to be lower than portfolios which invest more in risky assets (like global equities).
- They know that this is not a long-term holding for their investment as the value is likely to diminish in real terms over time.

The Service aims to improve total returns and actively manage short-term risks through increasing or decreasing holdings in asset classes and individual funds. These allocations are determined by the Openwork Wealth Services Limited investment team, which benefits from full transparency of the funds' underlying investments and is controlled through a strict governance framework.

### Risk Range

The Openwork Partnership will risk-rate investors based on their answers to a number of questions and appropriate validation.

○ Limited risk
 ○ Cautious
 ○ Balanced
 ○ Adventurous
 ○ Speculative

This portfolio is risk-rated as Limited Risk

(Note that it is not designed to be held as a medium to long-term investment.)

### Launch Date

31 October 2019

## Discrete Annual Performance (as at 31/05/2022)

	31/05/2021 31/05/2022	31/05/2020 31/05/2021	31/05/2019 31/05/2020	31/05/2018 31/05/2019	31/05/2017 31/05/2018
Portfolio	-4.56%	5.01%	-	-	-

The above figures show the indicative performance of the portfolio, which includes all asset allocation trades. Your individual performance will depend on the date of your investment.

## The last 12 months...

When investing, it is always important to take a medium to long-term perspective. This is because shorter term periods can be much more volatile and deliver lower and sometimes negative returns, as illustrated by the rolling 12-month periods shown above.
