

Portfolio Objective

The Service is designed for a cautious investor, who should have:

- Limited experience of investment products, and is probably more familiar with bank and building society accounts.
- An understanding that in general terms investment products should be held for a minimum period of five years.
- A preference for outcomes that have a degree of certainty, although they will understand that their investments could rise or fall.

The Service aims to improve total returns and actively manage short-term risks through increasing or decreasing holdings in asset classes and individual funds. These allocations are determined by the Omnis Investments Limited investment team, which benefits from full transparency of the funds' underlying investments, and is controlled through a strict governance framework.

Risk Range

The Openwork Partnership will risk-rate investors based on their answers to a number of questions and appropriate validation.

Limited risk
 Cautious
 Balanced
 Adventurous
 Speculative

This portfolio is risk-rated as **Cautious**

Portfolio Details

Launch date	31 May 2024
Discretionary fee	0.10%
OCF of underlying investments	0.42%
Total investment cost	0.52%

Investment highlights

A positive month for markets - Global equities performed well, with UK and European stocks particularly strong. Both large and small caps rose as inflation eased. Value stocks outperformed growth stocks, mainly due to weakness in large-cap tech. Government bonds outperformed corporate bonds, as market sentiment remained cautious despite expectations for interest rate cuts.

Tactical asset allocation - Rate cuts should pave the way for out-of-favour asset classes to come back into vogue, including value, small cap and sovereign debt. Investors are already tilting their portfolios to these areas. We recently added new ETFs to the Omnis Agility portfolios to capture these themes, LATAM equities, UK Smaller Companies, and US energy ETFs.

We remain cautiously positioned - We have an overweight allocation to bonds and slight underweight in equities. Although stock markets have rallied, a weaker economy could put pressure on company revenues. Our central case remains falling inflation, a peak in the interest rate cycle and a soft landing, but with a larger than normal risk of a deeper recession.
