

Portfolio Objective

The Service is designed for a balanced investor, with:

- Knowledge about financial matters, and shows some interest in keeping up to date with them.
- Some experience of investment, including in funds containing assets such as shares and government bonds.
- An understanding in general terms that investment products should be held for a minimum period of five years.
- An understanding that the value of their investments could rise or fall.

The Service aims to improve total returns and actively manage short-term risks through increasing or decreasing holdings in asset classes and individual funds. These allocations are determined by the Omnis Investments Limited investment team, which benefits from full transparency of the funds' underlying investments, and is controlled through a strict governance framework.

Risk Range

The Openwork Partnership will risk-rate investors based on their answers to a number of questions and appropriate validation.

Limited risk
 Cautious
 Balanced
 Adventurous
 Speculative

This portfolio is risk-rated as **Balanced**

Launch date	31 May 2024
Discretionary fee	0.10%
OCF of underlying investments	0.46%
Total investment cost	0.56%

Strategic Asset Allocation

Investment highlights

European stocks gain momentum - Europe has been the standout market year-to-date, despite tariff threats. European stocks rallied on hopes that increased defence spending and a potential end to the war in Ukraine could boost growth. Recent economic data suggests the region's economy is stabilising, with further support expected from interest rate cuts this year.

Bonds offset equity losses - Global bonds provided a silver lining for multi-asset investors, once again proving to be effective diversifiers against equity losses. While tariffs and stronger-than expected inflation data raised concerns, bond markets focused on weaker US sentiment and the growing risks to economic growth.

We remain cautiously positioned - We have an overweight allocation to bonds and slight underweight in equities. Although stock markets have rallied, a weaker economy could put pressure on company revenues. Our central case remains falling inflation, a peak in the interest rate cycle and a soft landing, but with a larger than normal risk of a deeper recession.

Overweight/Underweight Position Relative to Strategic Asset Allocation
