

## Portfolio Objective

The Service is designed for a balanced investor, with:

- Knowledge about financial matters, and shows some interest in keeping up to date with them.
- Some experience of investment, including in funds containing assets such as shares and government bonds.
- An understanding in general terms that investment products should be held for a minimum period of five years.
- An understanding that the value of their investments could rise or fall.

The Service aims to improve total returns and actively manage short-term risks through increasing or decreasing holdings in asset classes and individual funds. These allocations are determined by the Omnis Investments Limited investment team, which benefits from full transparency of the funds' underlying investments, and is controlled through a strict governance framework.

## Risk Range

The Adviser will risk-rate investors based on their answers to a number of questions and appropriate validation.

○ Limited risk ○ Cautious ○ Balanced ○ Adventurous ○ Speculative

This portfolio is risk-rated as **Balanced**

## Portfolio Details

Launch date	31 May 2024
Discretionary fee	0.10% p.a.
OCF of underlying investments	0.48% p.a.
Total investment cost	0.58% p.a.

## Investment highlights

**Positive returns from most major asset classes.** While we did not rebalance or implement specific TAA trades in July, performance was positive across nearly all regions and asset classes. Equity markets outperformed fixed income markets, led by China, Asia Pacific ex-Japan, North America and Emerging Markets. Cyclical assets continued their bounce from the tariff-induced soft patch in early April. There were modest negative returns for government bonds and modest positive returns for corporate credit. The US dollar registered its first monthly advance this year. For now this looks like a pause in the down trend rather than a change in fortunes.

## Strategic Asset Allocation

## Overweight/Underweight Position Relative to Strategic Asset Allocation

Portfolio	7.38%	-	-	-	-

The above figures show the indicative performance of the portfolio, which includes all asset allocation trades. Your individual performance will depend on the date of your investment.

The last 12 months...

When investing, it is always important to take a medium to long-term perspective. This is because shorter term periods can be much more volatile and deliver lower and sometimes negative returns, as illustrated by the rolling 12-month periods shown above.
